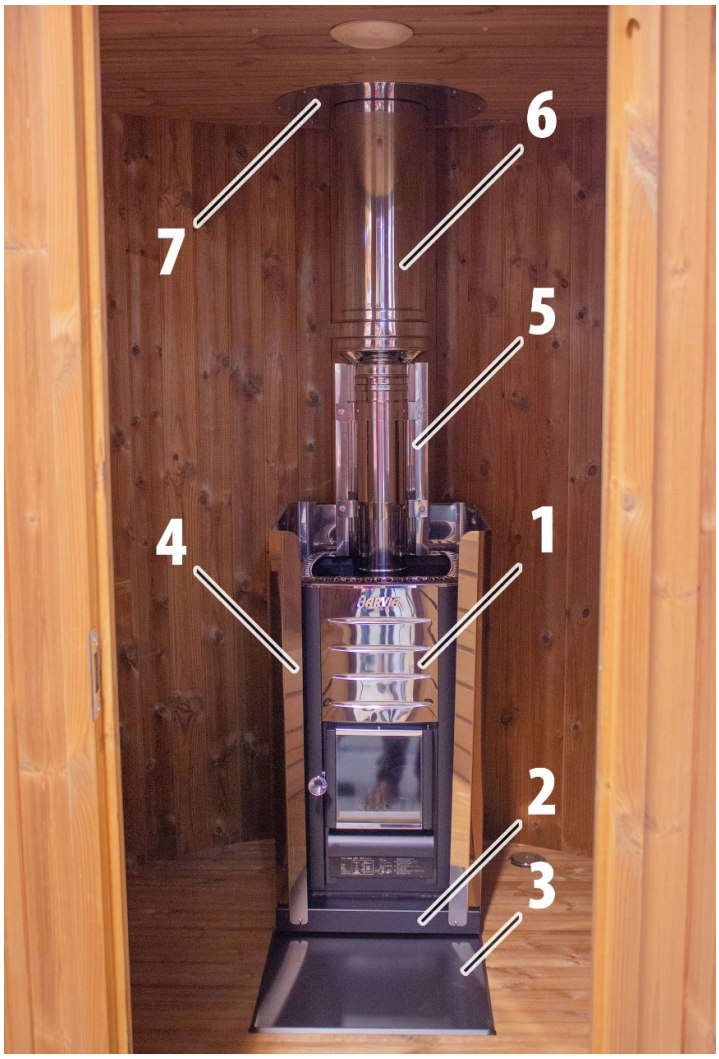
CHIMNEY AND FIRE PROTECTION PLATES



- The wood stove **(1)** stands on a fire-resistant bottom plate **(2)** from steel which is "filled" with fire proof rock wool.
- In front of the stove there is a metal sheet **(3)** that protect the floor from embers that can come out from the stove if the user is not observant.
- Surrounding the stove there is a shield **(4)** that is fastened to the bottom plate which protects the sides and back.
- Above the stove there is a radiation shield **(5)** that protects the back wall.
- This is connected to the double walled chimney **(6)** with a rock wool layer.
- In the top of the inner roof there's a metal plate **(7)** for protection.
